Project Name: **Study Buddy**

Module: **Software Engineering**

Sprint: **Sprint 2 – Requirements & Design**

Group Name: **(Legends)**

Members:

Fabin Gill (A00017906)

Ramesh Bist (A00030110)

Shishir Gotama (A00029921)

Ahmed Hassan (A00022015)

GitHub Link: https://github.com/rameshbeast/study-buddy-app

User Stories:

User Story 1 – View Users

I would like to see a user list as a student to locate possible study companions.
Acceptance Standards:
. The Users page lists every user.
. Information obtained from MySQL
. Displays:
Name, Course, and Availability

User Story 2 – View User Profile

I want to see a user's profile as a student to see their educational information.
Acceptance Standards:
When a user clicks, their profile page opens.
Displays:
. Name
. Course
. Topics
Accessibility:
. Bio

User Story 3 – View Study Sessions (Listings)

I want to check which study sessions are available so that I can sign up as a student.
Acceptance Standards:
All sessions are displayed on the Listings page.
. Displays:
. Subject
. Location (library/online)
. Time and date
. Made by the user

User Story 4 – View Session Details

I want to see the session's details as a student so I can make up my mind about attending.
Acceptance Standards:

The detail page is opened by clicking session.
. Displays
. Subject
. Description
The time and date
. Author
. Tags

User Story 5 – Tags / Categories

To discover pertinent sessions, I, as a student, would need them to be organized by subject.
Acceptance Standards:

. Sessions associated with tags (math, programming, etc.)

. The tag appears on the detail and listing pages.

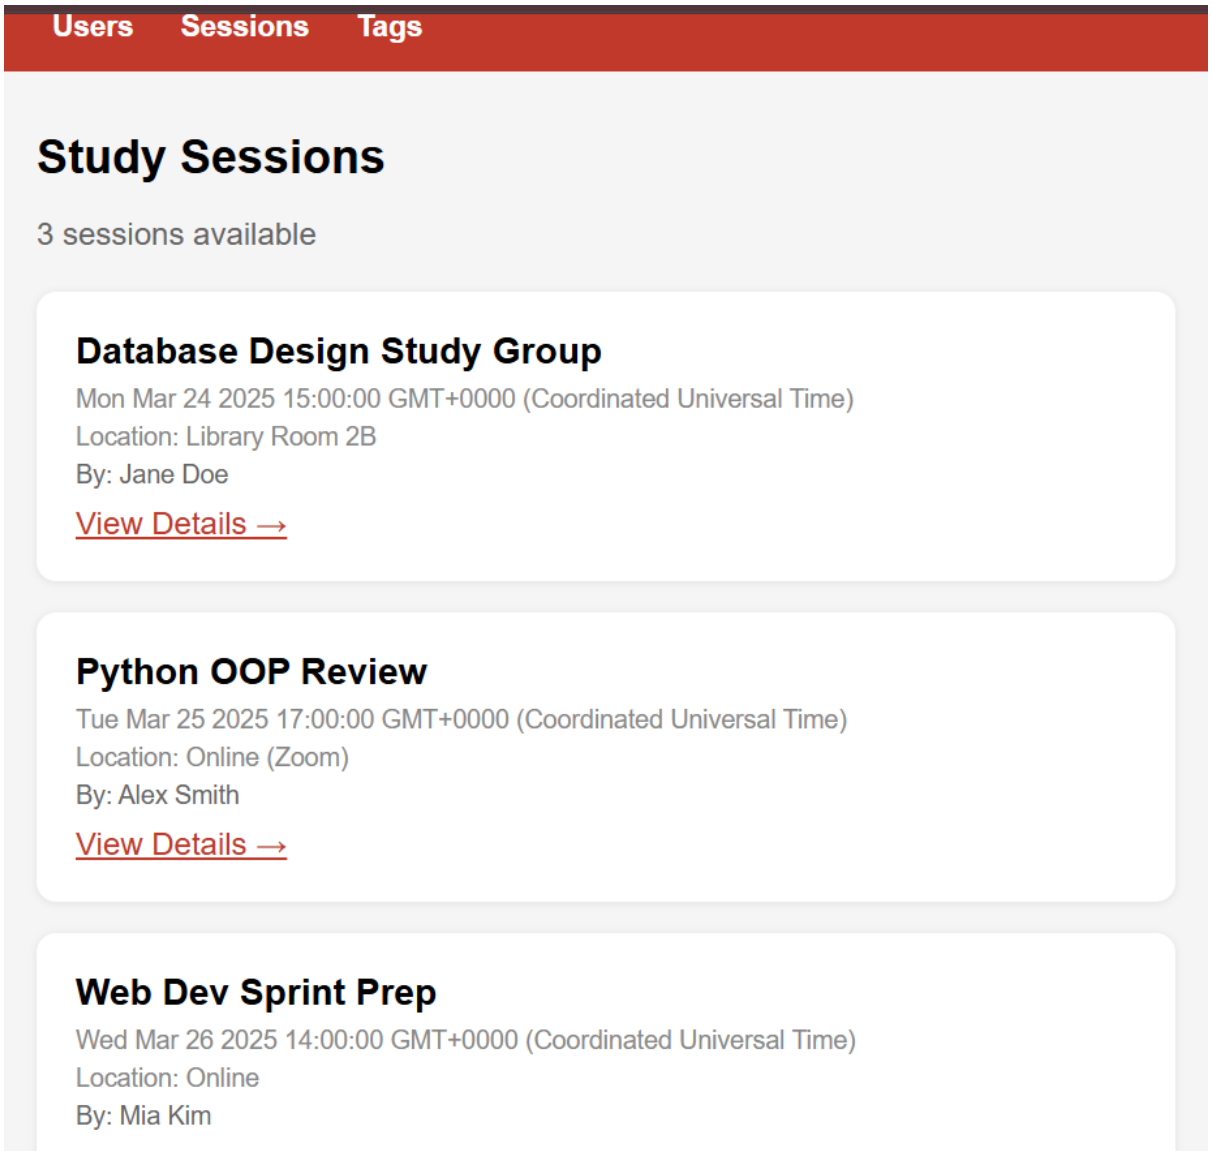
. Page Built in sprint 3:

All five required pages have been implemented. Each page uses real data pulled from the M SQL database - no hardcoded content. The application runs in Docker contain for consist net development
Environment.

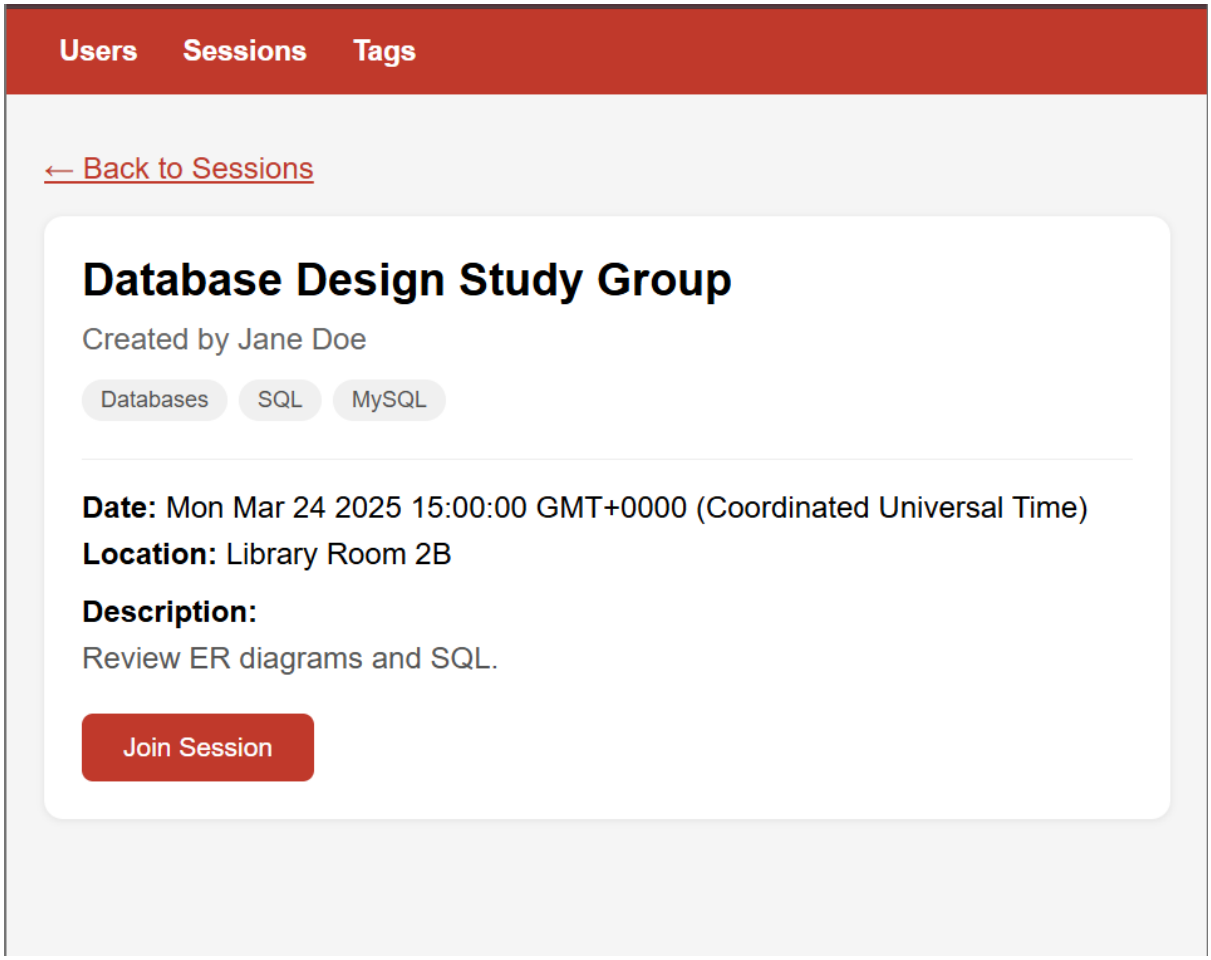
Page	URL	Description	DB Tables	Developer	Status
P01	/users	Lists all registered users with name, year and bio	users	Ramesh Bist	✓ Done
P02	/users/:id	Individual user profile with their listings	users, listings, listing_tags	Ramesh Bist	✓ Done
P03	/listings	All active listings with type badge, tags and poster name	listings, users, tags	Shishir Gotame	✓ Done
P04	/listings/:id	Full listing detail with poster info, tags and description	listings, users, tags	Ahmed Hassan	✓ Done
P05	/tags	Browse subjects by category with listing counts	tags, listing_tags	Ahmed Hassan	✓ Done

Screen short from the application:
The following screen shot shows all 5 pages running with live data from MySQL via Docker.

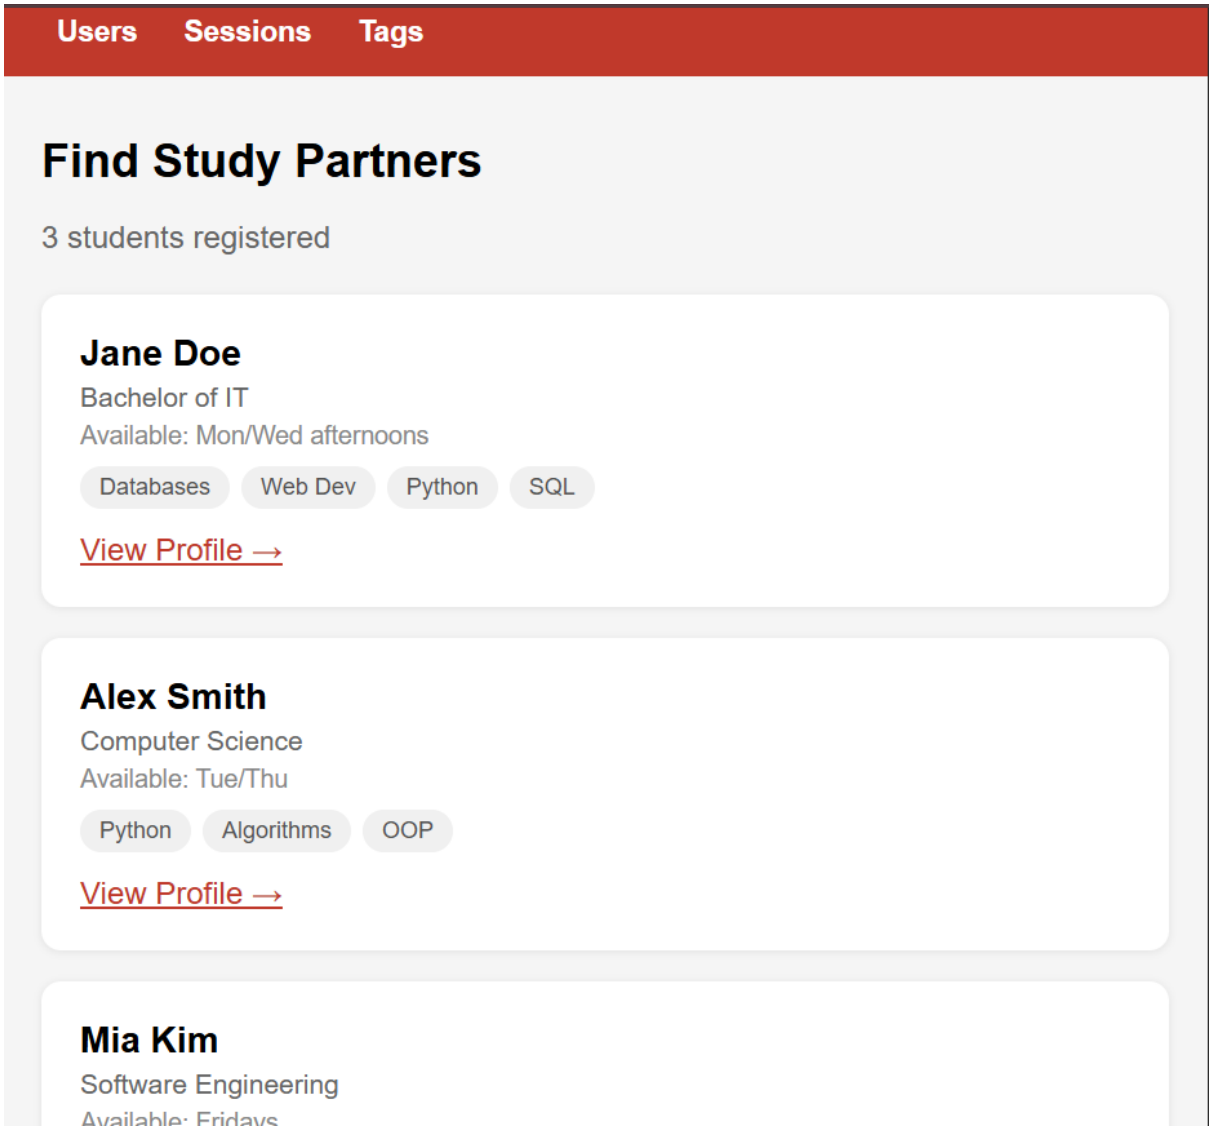
1.**Session Listing Page -Session:**
Shows 3 session: Database Design Study Group, Python OOP Review, web Dev Sprint prep-each with date, location and author and author pulled From MySQL. {Session List: https://didactic-happiness-v69v67vg6x9pcx7jv-3000.app.github.dev/sessions}



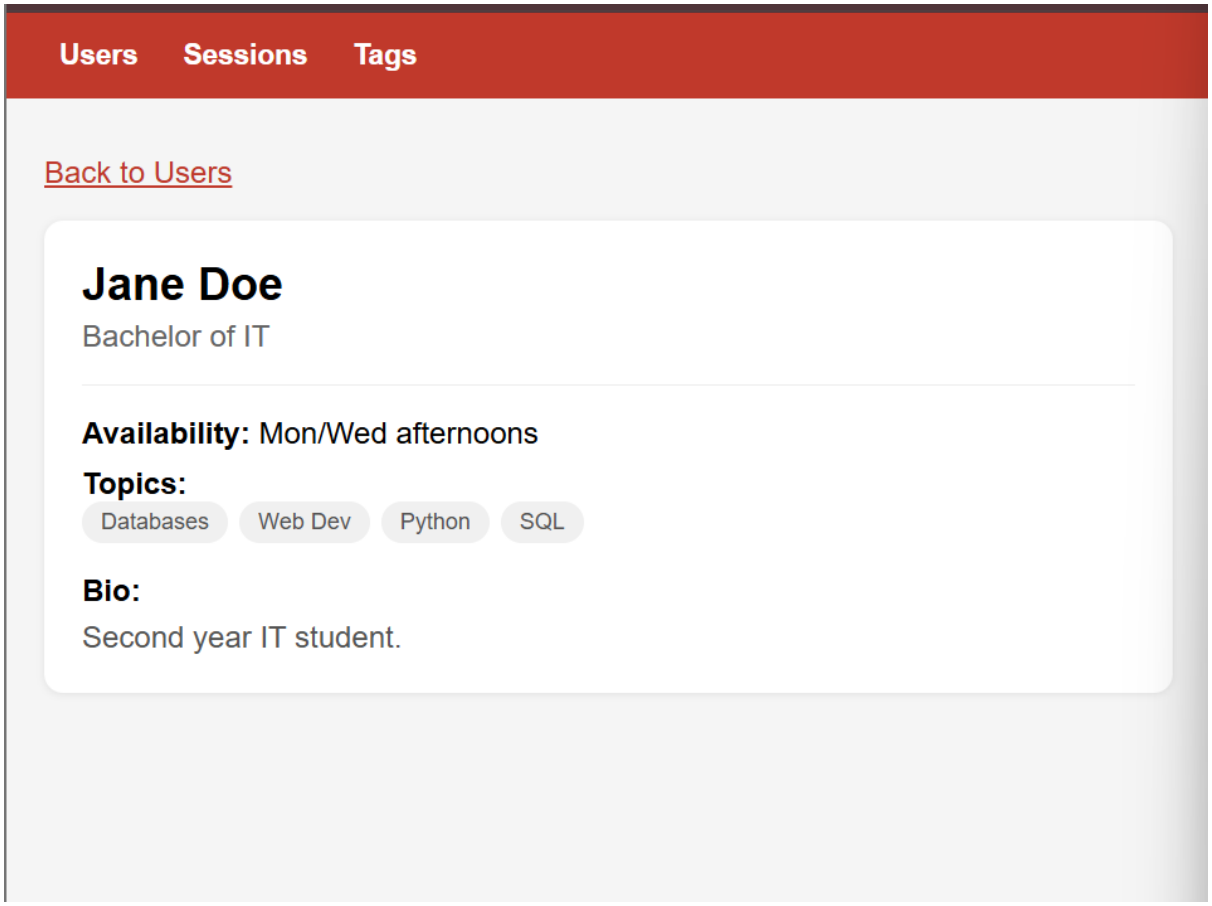
2.Session Detail Page:
Shows Database Design Study Group with Tags (Date base SQL ,MySQL) https://didactic-happiness-v69v67vg6x9pcx7jv-3000.app.github.dev/sessions/1



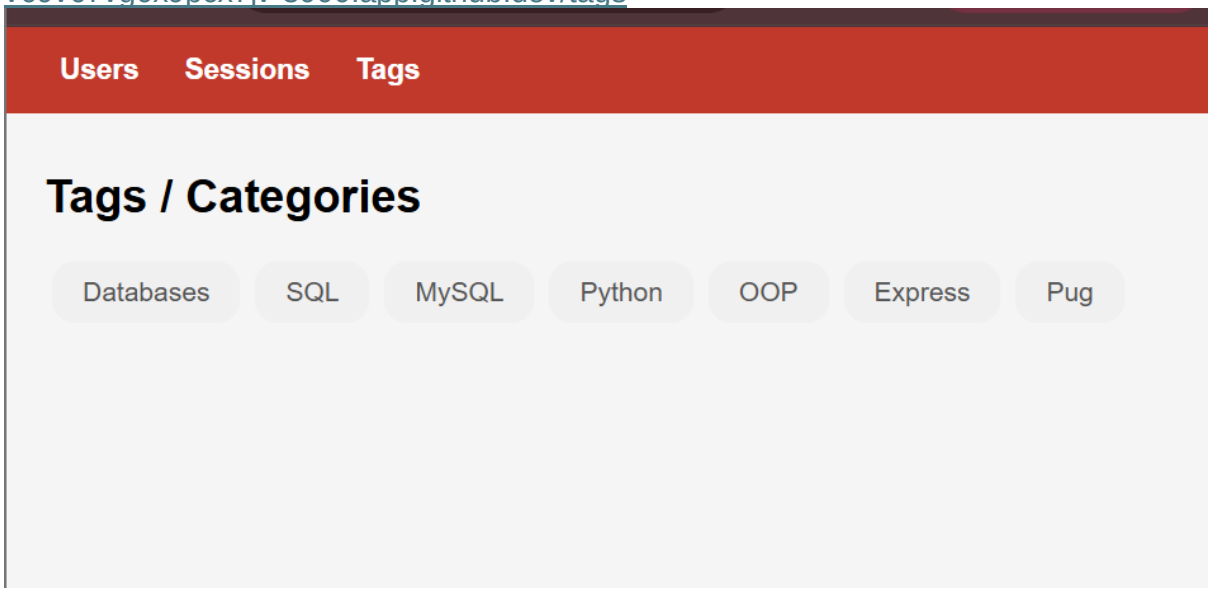
3.**User List Page -/Users:**
Shows 3 registered users jane Doe, Alex, Mia kim each with course. https://dida ctic-happiness-v69v67vg6x9pcx7jv-3000.app.github.dev/users



4.User profile Page -/User/1:
Shows jane doe full Profile: Bachelor of IT. https://didactic-happiness-v69v67vg6x9pcx7jv-3000.app.github.dev/users/1



5.Tags:
Shows7 Tags: Database, SQL, MySQL,Python,Pug,OOP etc. https://didactic-happiness-v69v67vg6x9pcx7jv-3000.app.github.dev/tags



Database Design:
The Study Buddy application uses a MySQL database to store users, study sessions, and tags. The database is structured to support.

Entity Relationships Diagram:

The system consists of three main entities: Users, Sessions, and Tags. A user can create multiple sessions (one-to-many relationship). Sessions can be associated with multiple tags to categorise topics (many-to-many relationship). The diagram below represents the database structure used in the Study Buddy application.

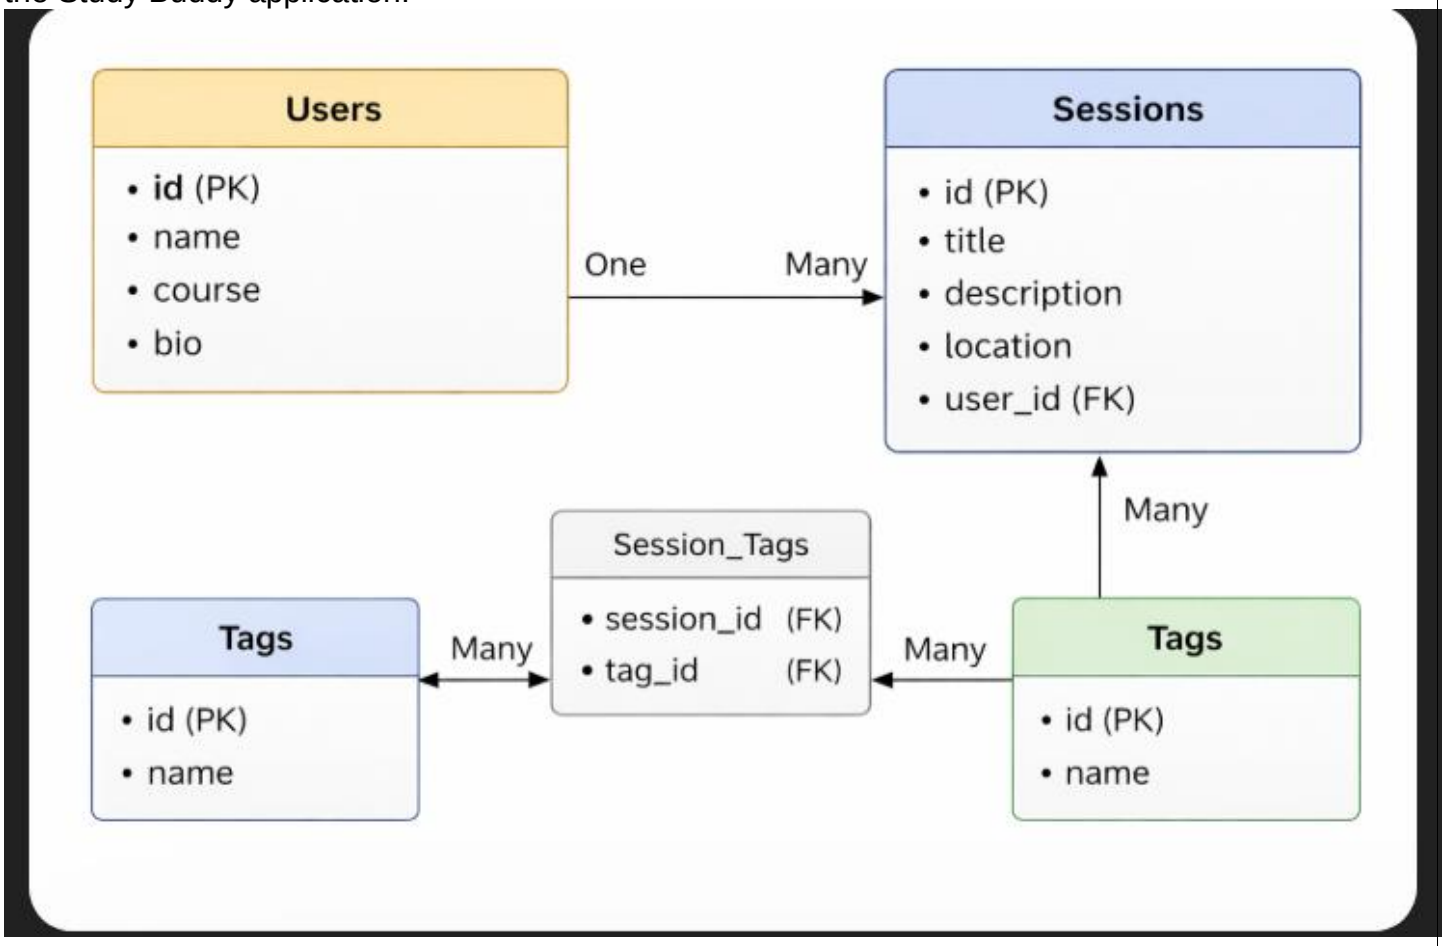


Table Schemas:

Table	Columns	Purpose
users	user_id, name, email, password_hash, year_of_study, bio, avatar_initials, created_at	Stores all registered users
listings	listing_id, user_id, title, description, listing_type, status, created_at	Study listings (offering/seeking)
tags	tag_id, tag_name, category	Subject tags and categories
listing_tags	listing_id, tag_id	Many-to-many: listings and tags
sessions	session_id, requester_id, listing_id, status, message, requested_at	Study session requests
reviews	review_id, session_id, reviewer_id, rating, comment, created_at	Post-session reviews and ratings

Sample Data Populated:

Table	Records Inserted	Sample Data
users	6 users	Fabian Gill, Ramesh Bist, Ahmed Hassan, Shishir Gotame, Sara Fox, Mike Kim
tags	14 tags	Python, Algorithms, Databases, Statistics, Essay Writing, Economics...
listings	8 listings	Python Tutoring, Algorithm Study Group, Statistics Help, Database Design Help...
listing_tags	12 records	Tags linked to listings for filtering functionality

Task Breakdown & Developer Allocation:

All tasks were tracked on the GitHub project kanban board. each task was assigned to a specific developer and linked to a GitHub issues.

Task	Developer	GitHub Issue	Status
Set up Docker environment	Fabian Gill	#1	Done
Design ER Diagram	Ahmed Hassan	#2	Done
Create database schema (schema.sql)	Ahmed Hassan	#3	Done
Insert sample data into database	Ahmed Hassan	#4	Done
Implement Express server with MySQL connection	Fabian Gill	#5	Done
Create /users route + users.pug	Ramesh Bist	#6	Done
Create /users/:id route + profile.pug	Ramesh Bist	#7	Done
Create /sessions route + sessions.pug	Shishir Gotame	#8	Done
Create /sessions/:id route + detail page	Ahmed Hassan	#9	Done

Task	Developer	GitHub Issue	Status
Create /tags route + tags.pug	Shishir Gotame	#10	Done
Test all pages in Docker	Fabian Gill	#11	Done
Push all code to GitHub	Fabian Gill	#12	Done
Update Kanban board	All Members	#13	Done

GitHub Metrics & Kanban Board:

All the team members have contributed commits to the repository. the GitHub project kanban board tracks all the tasks across sprints.

GitHub Contributions:

Team Member	Commits	Files Changed	Responsibility
Fabian Gill	3+	app.js, docker-compose.yml, Dockerfile	Backend setup, routing
Ramesh Bist	2+	users.pug, profile.pug	User pages frontend
Ahmed Hassan	2+	schema.sql, listing-detail.pug	Database, detail page
Shishir Gotame	2+	listings.pug, tags.pug	Listings, tags pages

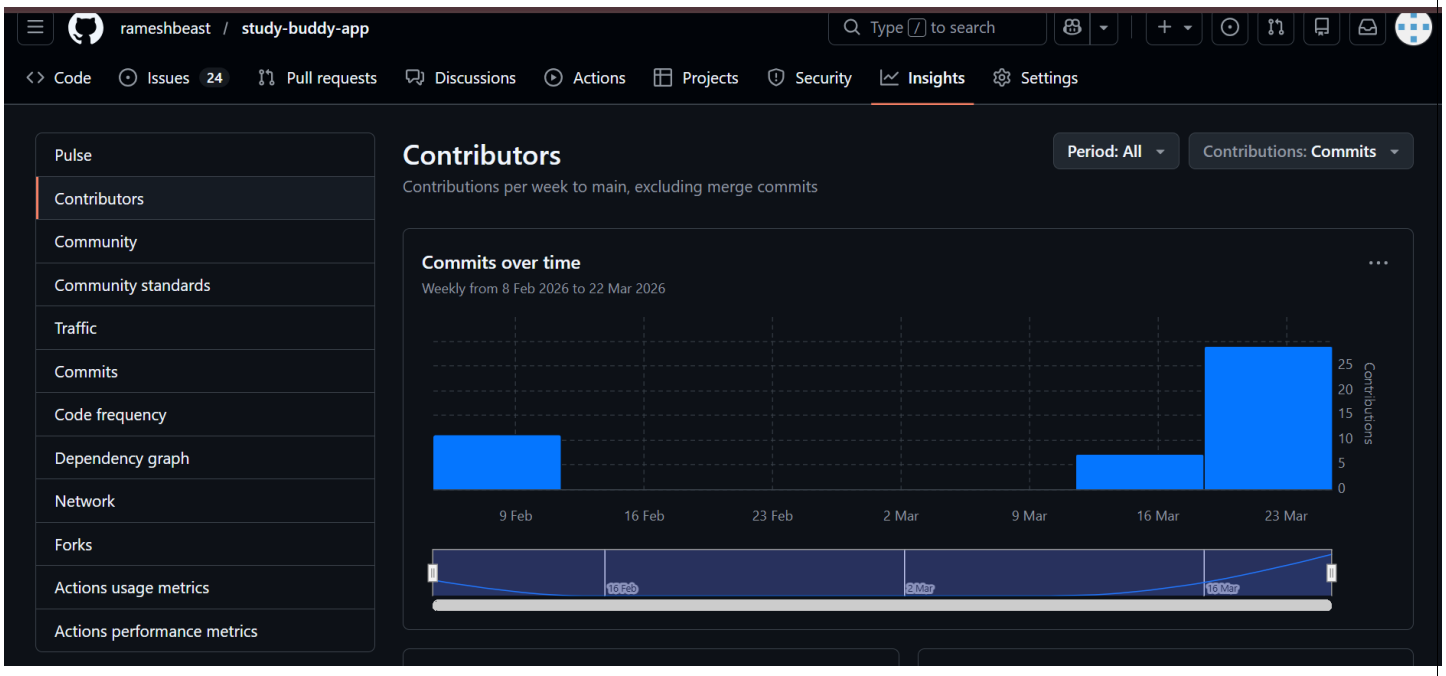
Team member Contributions:



Meeting Records:

Date	Attendees	Agenda	Decisions / Actions
Week 6 (Lab)	Fabian, Ramesh, Ahmed, Shishir	Review of Sprint 2 and plan for Sprint 3	Agreed on required pages (listing, users, profile, tags); tasks assigned to members

Date	Attendees	Agenda	Decisions / Actions
Week 7 (Online)	Fabian, Ramesh, Ahmed, Shishir	Docker setup and database discussion	Docker environment configured; database schema created; all members cloned project
Week 8 (Lab)	Fabian, Ramesh, Ahmed, Shishir	Review implemented pages and fix errors	Fixed issues in pages (e.g., layout bugs); confirmed all main pages are working
Week 9 (Online)	Fabian, Ramesh, Ahmed, Shishir	Final review and submission preparation	Code pushed to GitHub; Kanban board updated; final report prepared

All team members are ready for the Sprint 3 code reviews in week 10. Each member can build and run the development environment using Docker. the application is running with all 5 required pages pulling live data from the MySQL database.
